

False River Restoration Project Lake Water Level Drawdown begins September 2, 2014

- ❖ As part of an ongoing action plan for False River water quality improvements, the **Pointe Coupee Parish Policy Jury** will begin a lake drawdown, reducing the water level **by 2 to 2.5 feet**, starting the day after Labor Day on September 2nd
- ❖ False River water level will drop progressively for a three-week period until target level is reached
- ❖ Construction of the **South Flats Island and vegetative planting** will begin following the drawdown to improve water quality and fisheries habitat
- ❖ **Property and Boat owners** should take all necessary precautions to protect their properties – access to boats stored on the lake may be limited
- ❖ Use this time for **dock and pier repairs and cleanup** while water is low
- ❖ **Control gates will close** for the lake to refill – no later than March 1st - Refill of the lake will depend upon rainfall
